

NekoSpeak

Next-Gen AI Voice Engine for Android

100% Offline • Ultra Low Latency • Privacy First

Built by Sivasubramanian Ramanathan
Product Owner | Fintech & Digital Innovation

The Problem

Existing text-to-speech solutions release on Android often force a compromise:

1. **Robotic & Flat**: Older offline engines sound artificial (`espeak`).
2. **Privacy Invasive**: High-quality usually means sending data to the cloud.
3. **Latency**: Waiting for server responses breaks the reading flow.

“ "AI should assist us without compromising our privacy or patience." ”

The Solution: NekoSpeak

A drop-in replacement for system TTS that brings **State-of-the-Art AI** to the edge.

- **Triple Engine Core:**
 - **Kokoro (82M)**: Human-level expressiveness.
 - **Piper**: Fast, multilingual support.
 - **Kitten (Nano)**: Ultra-lightweight reliability.
- **Privacy by Design**: Zero data leaves the device.
- **Universal Compatibility**: Works with @Voice, MoonReader, etc.

Technical Engineering

Building for the "Edge" requires specialized architecture:

- **ONNX Runtime**: Quantized models (int8) for CPU efficiency.
- **Native C++ Bridge**: Custom JNI wrappers for `espeak-ng`.
- **Smart Batching**: Dynamic token buffering.
- **Kotlin Coroutines**: Non-blocking audio pipeline.

Why I Built This

My background in **Fintech & Innovation** (ex-BIS Innovation Hub) taught me that optimal products solve technical complexity with simple UX.

- **Offline First:** Balancing model size vs. user experience.
- **Accessibility:** High-quality AI voices for everyone, free of charge.
- **Curiosity:** Pushing mobile CPU limits without cloud GPUs.

About the Builder

Sivasubramanian Ramanathan
He/Him

Product Owner | Fintech, RegTech & Digital Innovation
Ex-BIS Innovation Hub Singapore | PMP | PSM II | PSPO II

I specialize in bringing structure to complex, early-stage ideas and building products with real impact.

I'm Looking for My Next Role

I am open to opportunities in **Singapore** 🇸🇬:

- **Roles:** Product Management, Fintech, Payments, RegTech, Digital Assets.
 - **Focus:** Building simple, safe, and genuinely useful solutions.
- “ "Taking messy, real-world complexity and structuring it into reliable product experiences."
- ”
